

Whether you are newly converted or a long time believer, **Misfit** has their wide-based, aluminum singlespeed **Cod Cogs** available for about \$30 in even numbers, 16-22t. Shimano cassette compatible, the cog won't damage fragile aluminum freehub bodies and weighs a mere 30g for the 22t version pictured. Add in the \$13 spacer kit and convert your geared setup toot-sweet. [www.misfitpsycles.com](http://www.misfitpsycles.com)

Off-the-bike style is part of the game and **Twin Six** doesn't disappoint. In addition to their technical wear, they have a whole assortment of **premium soft t-shirts**, men's and women's, for \$22 each. Fly your freak flag and let folks know how you roll. The shirts are made right here, Stateside. [www.twinsix.com](http://www.twinsix.com)

Backpack hydration systems made many put down the bottle. **Hydrapak** makes an array of packs in a variety of sizes, including the minimalist \$45 **Scramble** and the larger, Air Scoop equipped \$70 **AS Cargo**. Both feature locking bite valves, sternum and waist straps and insulated bladder compartments. And the wide mouth, rolltop bladders are a breeze to clean. [www.hydrapak.com](http://www.hydrapak.com)

**Oakley** pretty well created the high-end sports glasses market way back in the 80's. Now that we're a few years into the twenty-first century, they've introduced a new line, **Radar**, with a new hydrophobic lens coating. This coating resists any sort of would-be contaminate—water, oil, dust etc.—making clear lenses that much easier. \$155 - \$205 depending on configuration. [www.oakley.com](http://www.oakley.com)

**Industrial Revolution** creates the practical **Grilliput** and **Compact Firebowl** for minimalist barbecuing in either the backyard or at the campsite. The \$28 Grilliput assembles in a minute or two, and stashes into one screw-top tube for easy transport. The \$13 Firebowl collapses on itself to store coal or wood fuel and makes remote cooking a reality. Industrial design at its finest. [www.industrialrev.com](http://www.industrialrev.com)

Custom replacement footbeds have always been available for those willing to spend the money. **Sole** brings heat-moldable **footbeds** to the masses for about \$40 a pair. Heat 'em in the oven, put them in your shoes and walk around. Done—shoes with more arch support. Available in Ultra, Regular and Slim varieties to fit any shoe, and any foot. So far, we love them. [www.yourssole.com](http://www.yourssole.com) ☺
