

neck for those rides that last for hours and even days. Beginners will appreciate the lack of twitchiness and experienced riders will enjoy the light feel of the bike in turns. We've worked very hard to position the rider more towards the back two thirds of the bike, which limits the weight of the rider over the front wheel. This position helps prevent the feeling of over-steer, since the rider's weight isn't out over

the front end. Another benefit is that the rider's power goes to the rear wheel, where it moves the bike and rider forward with greater efficiency- especially noticeable on long climbs. ■

new European inspired handlebars and double kickstands further add to the comfort and function of the bikes as well. Both the 7spd and SS models are perfect vehicles for cruising around

town, off to the market or around the corner to grab a double cappuccino and a cheese danish. ■
